

aqueduct
purity by design

Water in perfect form

Amazingly simple

aqueduct marks a paradigm change in the market for water dispensers. The bag-in-box principle, together with the exclusive dispenser design and the innovative refrigerating technology, make aqueduct the water dispenser of the future – with the potential for a wide range of other beverages.

The water is tapped directly from vacuum-sealed 10 litre or 15 litre plastic bags packed inside cardboard boxes. The complete water box is chilled inside the unit. This system offers both you and your customers a **whole array of crucial advantages:**

- The water boxes are one-way products: the empty containers are directly recycled by your customers.
- Picking up of empties, as well as maintenance and cleaning work, is no longer necessary.
- The water boxes can be stored inside the unit to save space – and in the aqueduct PRO they are pre-chilled too.
- The water boxes are quick and easy to replace.

Bag-in-box: no maintenance, no hygiene problems, optimum use of space

smart

Incredibly fresh

When it comes to hygiene, aqueduct bag-in-box stands out clearly against other drinking water systems. Our systems are “hygienic by design” as against “designed to be unhygienic”.

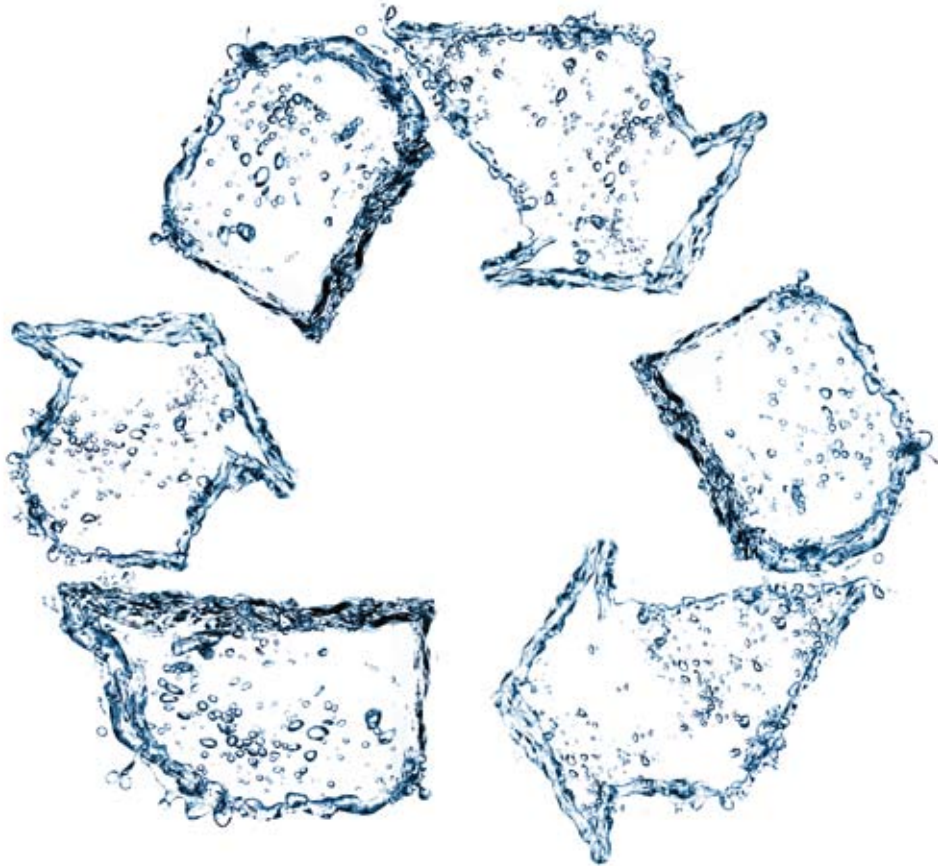

The compelling reasons:

- The water goes directly from the bag to the cup without contacting the machine or interim containers.
- Whenever an empty water bag is disposed of, the tap is also replaced thus eliminating one of the biggest sources of contamination.
- The water is not exposed to light or air during storage, eliminating “green bottle” problems, bacterial and algal growth within the cooler.
- Even when water is being dispensed, no air at all can get into the vacuum bag – so the water remains fresh and clean even after opening.
- In the case of the aqueduct PRO the reserve boxes are already chilled during storage inside the unit.

All this is of course not only healthy – it’s also reassuring to know that it tastes delicious too!

Perfect hygiene: no contact with the machine, no exposure to light or oxygen – even after opening

Convincingly sustainable

The bag-in-box principle combines easy dispensing of delicious fresh water with optimum environmental compatibility, from production to disposal:

- The entire packaging manufacture is economical with resources.
- The plastic bag and the cardboard box are 100 % recyclable.
- Thanks to the optimum use of space – particularly when compared to the gallon containers or bottles usual in this market – the CO₂ footprint is considerably reduced during distribution.
- The end to maintenance work and the pickup of empties also helps to improve the CO₂ balance considerably – as does the fact that the distribution radius is dramatically increased from a single water plant.

During this time of increased environmental awareness the importance of limiting “environmental water miles” is a key benefit that aqueduct bag-in-box systems impart.

The water boxes need 33 % less space than bottles and gallon containers – and they are stackable.

versus

green

Surprisingly far-sighted

Because aqueduct means water in perfect form, it's also the water dispenser system of the future. This system opens up for you completely new customer groups and sales opportunities – and hence an almost inexhaustible sales potential with minimum expense.

Because aqueduct is:

- Maintenance-free
- Aesthetic
- Hygienic
- Space-saving
- Environmentally friendly
- Practical

And aqueduct isn't just for water: juices and other beverages are already available for this system – and they will put you a big step ahead of your time.

Future-proof: With over 1 billion bag-in-box units sold worldwide in a variety of liquid applications the advent of bag-in-box water is set to change yet another industry.

profitable

aqueduct FLEXi

aqueduct FLEXi

The flexible and trendy cooler for the small office or for home use
FLEXi, FLEXi STORE, FLEXi STORE +

Standard Features

- Refrigerator technology based cooler
- Capacity 1 x 10 litre box
- Fast chill contact plate
- Drip tray
- Temperature display

FLEXi

- Small footprint – fits neatly on table and counter tops

FLEXi STORE

- Counter top machine with base storage cabinet
- Base storage cabinet with storage for 3 x 10 litre boxes (non-chilling)

FLEXi STORE +

- Counter top machine with base storage cabinet
- Base storage cabinet with storage for 3 x 10 litre boxes (non-chilling)
- Integrated cup dispenser

Optional Extras

- Light box for advertising and branding
- Economy “sleep” mode feature

aqueduct FLEXi STORE

aqueduct FLEXi STORE +

aqueduct PRO

The stylish and sophisticated freestanding cooler for offices

Standard Features

- Refrigerator technology based cooler
- Capacity 3 x 15 or 4 x 10 litre boxes with pre-chilling of in-machine storage
- Fast chill contact plate
- Integrated cup dispenser
- Large drip tray
- Light box for advertising and branding
- Touch button dispensing for complete hygiene
- Temperature display

Optional Extras

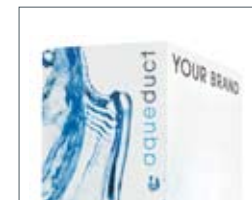

- LCD Display (replaces light box)
- Modem for LCD Display
- Economy “sleep” mode feature

aqueduct PRO

The aqueduct water boxes are also available with your branding
